Changes Version 19.11.0

Contents

Improvements

- Word-Export
    - The patent family can now be sorted via country code or publication date
    - It is possible to start a new page for each paragraph (optional)
- Excel-Export
    - The full evaluation can now be exported
      (regardless of the currently open project/task)
    - When exporting evaluations, the corresponding patent numbers will also be exported
      (multiple evaluations within a patent family)
    - „Patent number" was renamed to „Document number"
- When saving a search a new window will open
    - in which it is possible to sort the columns
    - where it is possible to filter the name of the search
- In detail view it will be displayed if the text is a machine translation
- The Login-window was generally improved
    - It is now possible to select the language in the Login-window.

Bug fixes

- A communication problem after a Windows update was fixed (concerning the ClickOnce installation)

- It was not possible to copy IPC/CPC classes in detail view
- In specific cases, empty pages were exported when using the Word export.
- A caption error was fixed in the bracket search block.
- Some minor errors in the Excel-export concerning the additional fields were fixed.
- An error concerning the renaming of Highlighting schemes was fixed
- Some minor errors in the menu bar were fixed
