Features

Date search

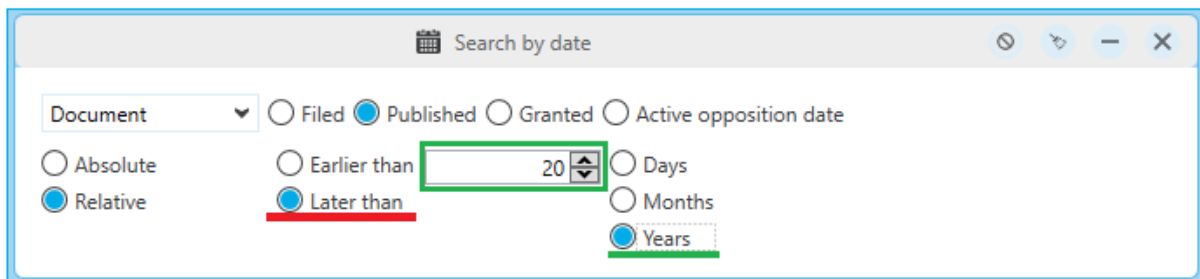

A new function has been added to the date search especially for automatic search profiles.

With the option "Relative", the search is based on the current date.

A time span can be defined in days, months or years.

The option: "Later than" can be used to search for patents that are younger than 20 years, for example.

In this way, very old patents can be excluded without having to manually update the date again and again.

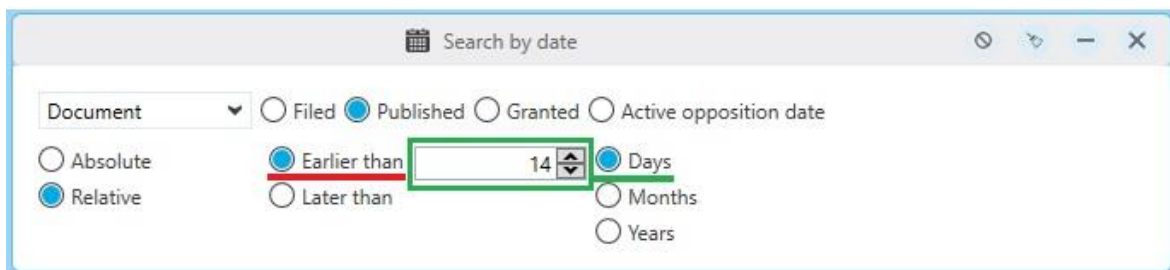

The screenshot shows a window titled "Search by date". It has a "Document" dropdown menu and several radio button options: "Filed", "Published" (selected), "Granted", and "Active opposition date". Below these are two columns of radio buttons. The left column has "Absolute" and "Relative" (selected). The right column has "Earlier than", "Later than" (selected and underlined in red), "Days", "Months", and "Years" (selected and underlined in green). A text input field next to "Earlier than" contains the number "20" and is highlighted with a green box.

With the option: "Earlier than" you can create a certain delay.

If you do not want to see very new patents for the time being because, for example, machine translations are not yet available.

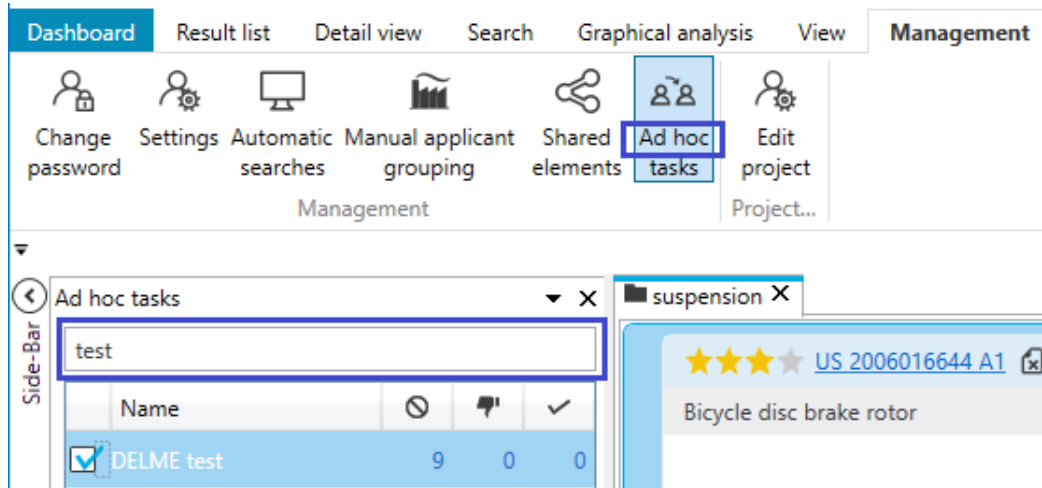

The screenshot shows a window titled "Search by date". It has a "Document" dropdown menu and several radio button options: "Filed", "Published" (selected), "Granted", and "Active opposition date". Below these are two columns of radio buttons. The left column has "Absolute" and "Relative" (selected). The right column has "Earlier than" (selected and underlined in red), "Later than", "Days" (selected and underlined in green), "Months", and "Years". A text input field next to "Earlier than" contains the number "14" and is highlighted with a green box.

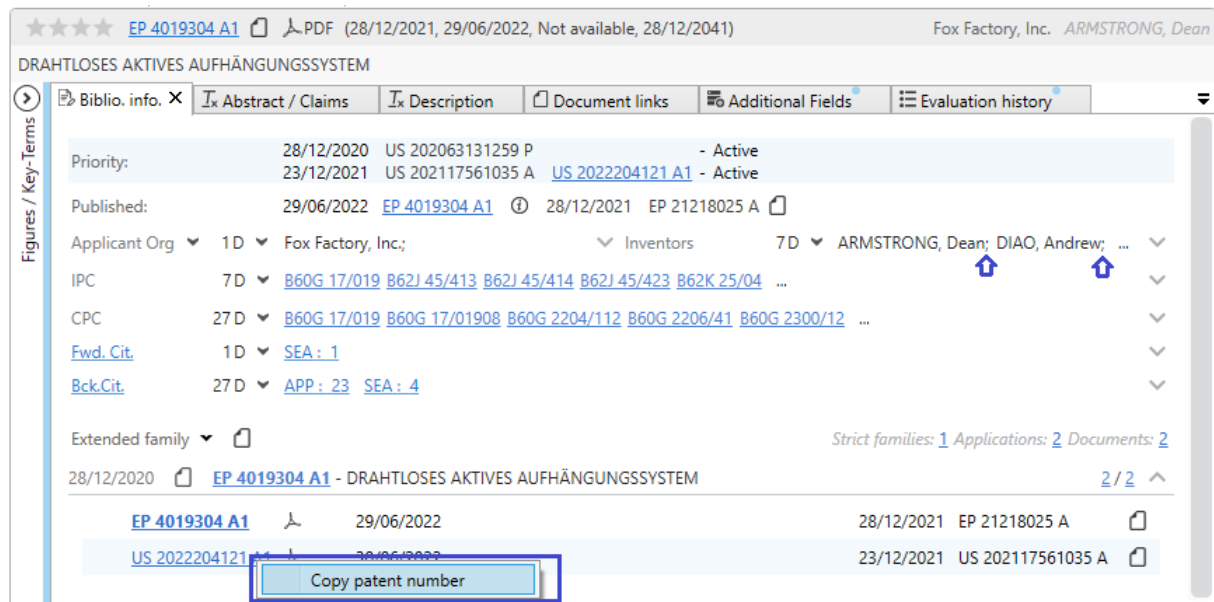

This new function is not yet available in the CLI search.

Improvements

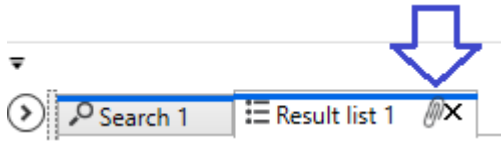

- Ad Hoc Task
 - o renamed "Tasks" to "Ad Hoc Tasks" in the menu
 - o a new filter to filter Ad Hoc Task names has been added

- Detail view
 - o several applicants/inventors are separated in the overview with ";"
 - o in the family view the patent number can be copied with a right click

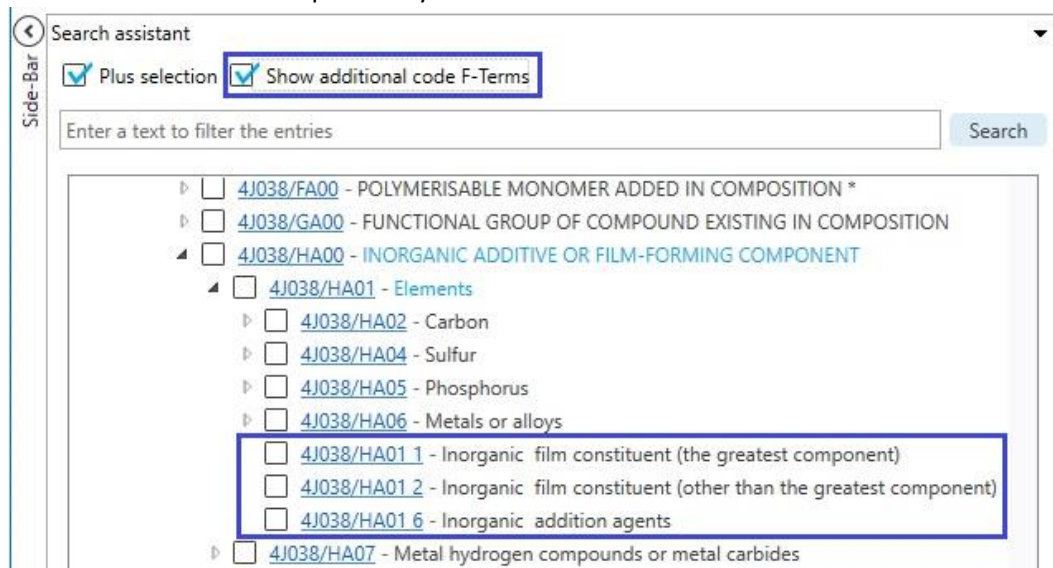

- Result lists created by a search can be detached from the respective linked search (tab)

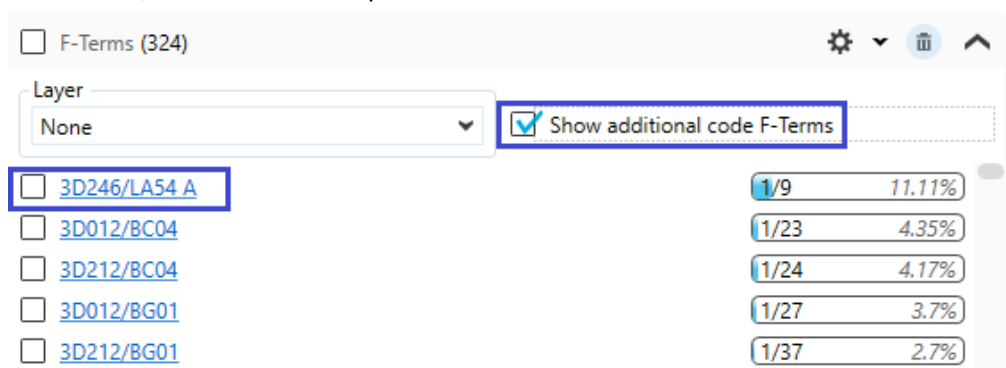

Similar to the detail view, the link between the tabs can be removed by clicking on the paper clip.

- F-Terms: "additional codes"
 - o In the search there is the possibility to show or hide "additional code" F-Terms.

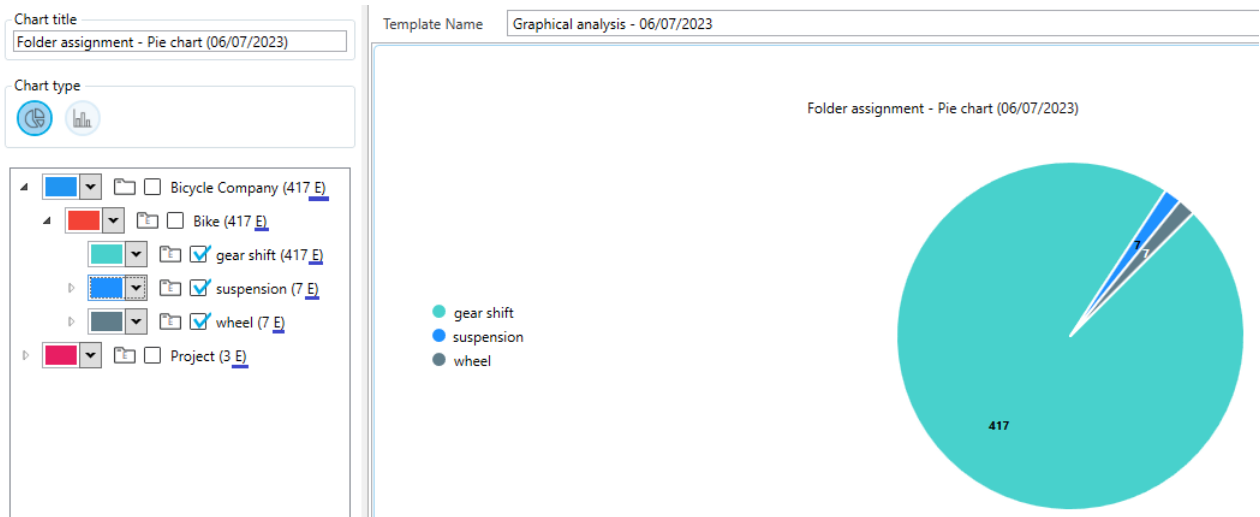

- o In the filter, there is also the option to show or hide "additional code" F-Terms.

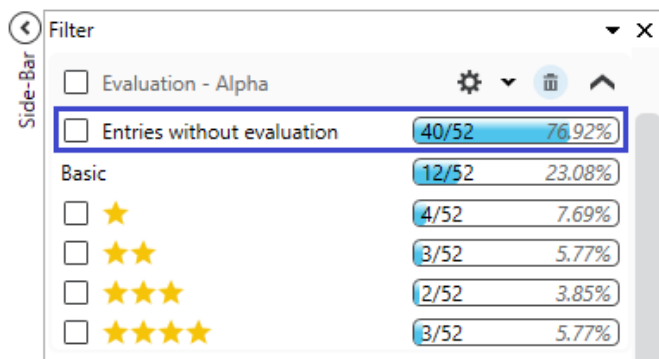

- o Clicking on the F term leads to a link to the corresponding "J-PlatPat" page. For "additional code" F terms, if available, to the corresponding "additional code" page.

- Graphical analysis: Folder analysis
 - o The folder tree remains expanded when switching between analyses/diagrams.
 - o The number in brackets to the right of the folder name always refers to the base of the result list. This was also the case in previous versions. Now the base of the result list is displayed next to the number.

- In the filter section: Evaluation, the line: "Entries without evaluation" can be permanently hidden for your network if desired.

Bugs fixed

- In an attached highlighting, clicking on a synonym group (3) caused the tool to crash instead of displaying the synonyms

The screenshot displays the IP7 tool interface with three numbered annotations:

- 1:** Points to the 'Highlighting' sidebar, specifically the 'Schemes' section where the 'e-bike' scheme is selected.
- 2:** Points to the 'e-bike' label in the 'Research projects' list.
- 3:** Points to the 'bicycle' synonym group in the 'Synonym groups' list.

The interface includes the following sections:

- Highlighting:** Shows 'Schemes' with 'default/Standard' and 'e-bike' (selected). Below are icons for document, link, highlight, eraser, trash, and plus.
- Research projects:** A list with a filter input. Entries include 'bike and battery' (linked to 'e-bike') and 'default' (linked to 'default/Standard').
- Monitoring tasks:** A list with a filter input. Entries include 'Bike Brake Distribution' (linked to 'default/Standard') and 'Bike Disc Brakes' (linked to 'e-bike').
- Synonym groups:** A list of groups with checkboxes and counts: bicycle (3), brake (0), disc (0), electric battery (0), and frame gehäuse (1).
- Synonyms:** A list of synonyms with checkboxes: *bike*, bicycle, Bicycles, Fahrrad*, and pedal device.
